## Tommy Mat Washer Timer Relay Revision

The following revisions to the timer relays inside the Tommy Molded and Flat Mat Washers will prevent the washers from running constantly in the case of a start pushbutton becoming stuck.

**This revision should be performed regardless of whether you have experienced a stuck start pushbutton or a constantly running mat washer.**

### Molded Mat Washer

Timer Relay 10 (TR10) and Timer Relay 11 (TR11) need to be adjusted from mode D to mode E, as shown in the photos to the left.

A terminal screwdriver can be used to rotate the dial clockwise from D to E. Please ensure the dial clicks into place and is not stuck between modes.

## Flat Mat Washer

Timer Relay 10 (TR10) needs to be adjusted from mode D to mode E, as shown in the photos to the left.

A terminal screwdriver can be used to rotate the dial clockwise from D to E. Please ensure the dial clicks into place and is not stuck between modes.
